

## Improvements made

- Course type value –
  - Initially the values were 1,2,3 and 4 but now I have changed the values for its appropriate name.
  - Why? because the course types can be easy returned with the following method.
    - `$CourseType = $_POST['CourseType'];`

before	<pre>&lt;td&gt;Course Type &lt;/td&gt; &lt;td&gt;&lt;select name="CourseType" id="CourseType"&gt; &lt;option value="1" selected="selected"&gt;Undergraduate Degree&lt;/option&gt; &lt;option value="2"&gt;Graduate Diploma&lt;/option&gt; &lt;option value="3"&gt;Masters by Coursework&lt;/option&gt; &lt;option value="4"&gt;Masters by Research&lt;/option&gt; &lt;/select&gt; &lt;/td&gt;</pre>
After	<pre>&lt;td&gt;Course Type &lt;/td&gt; &lt;td&gt;&lt;select name="CourseType" id="CourseType"&gt; &lt;option value="Undergraduate Degree" selected="selected"&gt;Undergraduate Degree&lt;/option&gt; &lt;option value="Graduate Diploma"&gt;Graduate Diploma&lt;/option&gt; &lt;option value="Masters by Coursework"&gt;Masters by Coursework&lt;/option&gt; &lt;option value="Masters by Research"&gt;Masters by Research&lt;/option&gt; &lt;/select&gt; &lt;/td&gt;</pre>

- Credit points –
  - Each unit has a credit point worth 15 or 20. Therefore, I have added drop down boxes for the credit points column.
  - This reduces the errors caused by the users.
- I have improved the style using CSS. I have changed the color of the table and made it much more eye catching. Additionally, I also have aligned the table to the center of the web page.

## Future improvements –

- Its better if the details are added one at a time rather than adding it all at once to the table. It will help reduce errors caused by users.
